

# OpenAI functions

Certain OpenAI models (like gpt-3.5-turbo-0613 and gpt-4-0613) have been fine-tuned to detect when a function should be called and respond with the inputs that should be passed to the function. In an API call, you can describe functions and have the model intelligently choose to output a JSON object containing arguments to call those functions. The goal of the OpenAI Function APIs is to more reliably return valid and useful function calls than a generic text completion or chat API.

The OpenAI Functions Agent is designed to work with these models.

Install openai,google-search-results packages which are required as the langchain packages call them internally

```
pip install openai google-search-results
```

```
from langchain import LLMChain, OpenAI, SerpAPIWrapper, SQLiteDatabase,
SQLDatabaseChain
from langchain.agents import initialize_agent, Tool
from langchain.agents import AgentType
from langchain.chat_models import ChatOpenAI
```

```
llm = ChatOpenAI(temperature=0, model="gpt-3.5-turbo-0613")
search = SerpAPIWrapper()
llm_math_chain = LLMChain.from_llm(llm=llm, verbose=True)
db = SQLiteDatabase.from_uri("sqlite:///.../notebooks/Chinook.db")
db_chain = SQLDatabaseChain.from_llm(llm, db, verbose=True)
tools = [
    Tool(
        name = "Search",
        func=search.run,
        description="useful for when you need to answer questions about
current events. You should ask targeted questions"
    ),
    Tool(
        name="Calculator",
        func=llm_math_chain.run,

    )
]

```

```

agent = initialize_agent(tools, llm, agent=AgentType.OPENAI_FUNCTIONS,

```

```
